SurfaceShield® Protectant

Blocks mold-supporting nutrients. Unlike most other protectants that must be applied to dry wood, SurfaceShield and SurfaceShield Plus can be applied to building materials with a moisture content of 11%–30%. Used as the final step on remediation jobs or in new construction, it protects against damage and staining from mold and mildew. Ideal for a variety of porous surfaces including wood, concrete, paper, drywall and more. Available in U.S. only.

FEATURES

- Breathable barrier with permeability rating of 11–14 allows water to evaporate while blocking mold-supporting nutrients from migrating to the surface
- Two options: Clear that doesn't affect materials' appearance, or white-tinted Plus version to show coverage
- Contains an EPA-registered preservative to inhibit growth of mold and mildew on the dry surface coating
- Unique penetrating formula will not blister or peel like antimicrobial paints can
- Added protection against future water damage and staining from mold and mildew
- Economical, water-thin, low-VOC solution that can be applied with airless sprayer

SIZES - OPTIONS

- **113349 (252753000):** SurfaceShield (clear): One 5 gal. / 18.9 L pail
- **119704 (252763000):** SurfaceShield Plus (white tint): One 5 gal. / 18.9 L pail

SPECIFICATIONS

- **Form :** Liquid RTU
- **pH:** 8.2
- **Storage and transport:** Protect from freezing (possible damage to container)
- **Appearance:** Translucent liquid
- **Flash point :** 224°F | 106.6°C
- **Nonvolatile matter:** 3%
- **Specific gravity:** 1.05
- **VOC:** Nil
- **Patent no.:** 7,655,281
- **Xactimate:** PNTS+++
